

Fire Apparatus & Emergency Equipment's 2009 Award
for
Best Water Handling Innovation
was
presented to the Kocheck Co. for their
New Self-Leveling Floating Strainer

**The announcement appears
on page 12 of the January, 2010 addition and reads:**

Drafting In Any Conditions
The 2009 award for Best Water Handling Innovation goes to
Kocheck's new self-leveling floating strainer.

“Floating strainers are not new, but Kocheck has developed
a self-leveling, lightweight aluminum version
that makes drafting possible under almost any condition.

Available with threaded, Storz or Camlock connections in a variety of sizes,
it has a balanced handle that makes carrying and deploying very easy.
A high intake ratio allows maximum flow rates, according to Kocheck,
while the vortex shield protects against whirlpooling.

The new compact design is the most efficient and lightest on today's market
and provides for convenient storage.
